A Fusion of Technology and Art

Opening New Horizons for Artisans

One-Day Hands-on
WORKSHOP/TRAINING/DEMONSTRATION

Monday, 19th February, 2024: 2:30 PM

Funded by DST under the SYST
Organized by CSIR-AMPRI Bhopal

About

Workshop/Training/Demonstration:

In today's rapidly evolving world, the intersection of technology and art presents boundless opportunities for artisans to innovate, create, and excel. This workshop aims to explore this dynamic fusion, offering participants a platform to learn, collaborate, and experiment with cutting-edge technologies alongside traditional artistic practices.

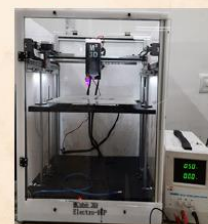

Through a series of interactive sessions, demonstrations, and hands-on activities, participants will delve into various aspects where technology complements and enhances artistic expression. From digital design tools and 3D printing to augmented reality and interactive installations, attendees will gain insights into how these tools can revolutionize their craft, expand their artistic horizons, and open doors to new avenues of creativity.

Moreover, this workshop will foster networking opportunities, allowing artisans to connect with experts in both technology and art, exchange ideas, and forge collaborations that can propel their careers to new heights.

Dr. Avanish Kumar Srivastava
Director, CSIR-AMPRI, Bhopal

Developed Techniques and Method

Electrochemical 3D Printer
